CLAIMS

1. (Currently Amended) A memory module comprising:

a first redrive circuit to receive a signal from a first point-to-point link and redrive the signal on a second point-to-point link;

a second redrive circuit to receive a second signal from a third point-to-point link and redrive the signal on a forth point-to-point link;

a memory device; and

a data accumulator coupled between the first redrive circuit and the memory device.

2. (Original) A memory module according to claim 1 wherein the point-to-point links comprise unidirectional links.

3. (Original) A memory module according to claim 1 wherein the data accumulator comprises a FIFO structure.

4. (Cancelled)

5. (Currently Amended) A memory module according to claim 1 [[4]] wherein the memory device is coupled to the second redrive circuit.

6. (Original) A memory module according to claim 5 further comprising a second data accumulator coupled between the memory device and the second redrive circuit.

7. (Original) A memory module according to claim 1 wherein the memory device has a burst bandwidth that is greater than the bandwidth of the redrive circuit.

8. (Original) A memory module according to claim 1 wherein the data accumulator is constructed and arranged to accumulate data from the redrive circuit.

9. (Original) A memory module according to claim 1 wherein the data accumulator is constructed and arranged to accumulate data to the redrive circuit.

10. (Currently Amended) A memory buffer comprising:

a first redrive circuit to receive a first signal from a first point-to-point link and redrive the signal on a second point-to-point link; ~~and~~

a second redrive circuit to receive a second signal from a third point-to-point link and redrive the second signal on a fourth point-to-point link; and

a memory interface coupled to the first redrive circuit, wherein the memory interface comprises a data accumulator.

11. (Original) A memory buffer according to claim 10 wherein the point-to-point links comprise unidirectional links.

12. (Original) A memory buffer according to claim 10 wherein the data accumulator comprises a FIFO structure.

13. (Cancelled)

14. (Currently Amended) A memory buffer according to claim [[13]] 10 further comprising a second data accumulator coupled between the memory interface and the second redrive circuit.

15. (Currently Amended) A memory system comprising:

a memory controller;

a memory agent having [[a]] first and second redrive ~~circuit~~ circuits; and

a first point-to-point link arranged to transmit a signal from the controller to the first redrive circuit of the memory agent;

wherein the memory agent comprises a data accumulator coupled to the first redrive circuit.

16. (Original) A memory system according to claim 15 wherein the point-to-point links comprise unidirectional links.

17. (Original) A memory system according to claim 15 wherein the data accumulator comprises a FIFO structure.

18. (Canceled)

19. (Original) A memory system according to claim 15 further comprising a second point-to-point link arranged to transmit a signal from the memory agent to the controller.

20. (Cancelled)

21. (Currently Amended) A memory system according to claim [[18]] 15 wherein the memory agent further comprises a second data accumulator coupled to the second redrive circuit.

22. (Currently Amended) A method for operating a memory agent comprising:
receiving a first signal on a first point-to-point link;
redriving the first signal on a second point-to-point link;
receiving a second signal on a third point-to-point link;
redriving the second signal on a forth point-to-point link;
accumulating write data from the first signal; and
delivering the write data to a memory device.

23. (Original) A memory system according to claim 22 wherein the point-to-point links comprise unidirectional links.

24. (Original) A method according to claim 22 wherein accumulating and delivering the write data comprises accumulating and delivering the write data in a FIFO sequence.

25. (Cancelled)

26. (Original) A method according to claim 22 further comprising:
accumulating read data from a memory device; and
transmitting the read data as the second signal.
